

FileBound 5.4.4

Release Notes

New Features

Website

- **Added New FBRouteFile Plugin to Default Installed Plug-ins**
This plug-in is installed by default, but not enabled, after installation or upgrading FileBound. When a document is routed down a workflow route this plug-in will provide a user with the ability to perform workflow actions, such as complete or reject when viewing any document in a file that contains a routed document.
- **Move All Files to Another Project Option added to the Clipboard**
Files that have been placed on an administrator's Clipboard can be moved to a different project. This will move the file and all associated documents.
- **File/Document Deletion Report Added to Reports**
Administrators have an improved method to run a report to identify File and Document deletions.
- **Added Ability to Change Offline Location for Archives within the Admin Console**
Within the Admin Console administrators can now update the storage location of a FileBound Archive that has been taken offline.
- **File Activity Report Now Accessible From Within the Document Viewer**
Users with ability to run reports will now be able to right-click on a file within the Document Viewer and view the File Activity Report for the selected file.
- **Document Activity Report Now Accessible From Within the Document Viewer**
Users with ability to run reports will now be able to right-click on a page within the Document Viewer and view the Document Activity Report for the selected page.
- **Locked Documents Report Added to Reports**
When a project has the Document Locking project setting enabled the Locked Documents report will be available within the Reports area for users that have the ability to run reports.
- **Added ability to Specify Default Workflow Email Return Address**
Within the Project Properties in the Admin Console Administrators can now specify what default return e-mail address will be used when a user does not have an email address specified, or the email alert is being sent because the document was automatically started and routed to the first step in the route based on project properties.
- **Users Can Now Disable Confirmation Prompts within the Document Viewer**
Within the Document Viewer users can now disable all confirmation prompts within the Document Viewer that would normally prompt them when they select to print pages, save annotations and other like functions.
- **Users Can Now Disable Viewer Tab Tooltips within the Document Viewer**
Within the Document Viewer users can now disable all viewer tab tooltips within the Document Viewer that would normally be displayed when a user hovers over the tab.
- **Display Masks Now Work with Project Linking Field Type**
When an index field is set to use Project Linking and the linked to project uses a Field Mask to display multiple fields for the Key Visual Field this setup is carried over to the linked project.

- **Updated Masking Options for Date Field Type**

Four additional field masking options have been added to the Date index field type to allow for DD/MM/YYYY date formats.

Issues Resolved

Website

- Read-Only Field Security is now properly enforced on a Project Link index field.
- Archived By and Offline Loc Values are now displayed in the Archives Section of the Admin Console.
- User without rights to Add Documents can not scan within the File Details screen anymore.
- Non US date formats now supported for date masking on date formatted index fields.
- Fixed Unhandled Exception Error when sorting a numeric field using decimal places on the Home page.
- Fixed Document Count Report that would show same number of documents when using a Date field to limit results.
- All User Access and Admin Only Access settings within Plug-In Properties now works properly.
- Using a Task button on the Home Page to call a plug-in with a pop-up will no longer display the plug-in behind the active window.
- Taking an archive offline no longer creates a revision of a document if revisions are enabled for the project.
- Enabling Document Locking for a project now adds a Locked Documents tab to the Home page.
- User Login Report now shows the client PC IP Address and not the IP Address of the Web Server.
- The Archived By field for archives within the Admin Console is now properly updated when archiving from the Clipboard.
- Dashboard Report will now allow System and Project Administrators the ability to filter the report based on Project or Users.
- System Administrators now have the ability to edit the Offline Location of an archive within the Admin Console.
- Deleting an archive will now delete the file if all documents in the file are in an archive that was deleted.
- Changed By User in Files table is now updated when a File is deleted from within FileBound.
- Within the FileBound database the User Changed for a document is now properly updated when a user deletes a document.
- Searching for an existing file within the Integration Kit will now properly display the whole option list or project link value.

Document Viewer

- In the Document Indexing Viewer a Project Link Field is no longer populated to the first value instead of being blank.
- Project Link Field is no longer populated to the first value instead of a blank field within the Document Indexing Viewer.
- Revision changes are now properly saved for a non-Admin User.
- Default index field values are now displayed within the Un-Indexed Queue.
- Windows keyboard shortcut Alt+F4 will now close the FileBound Document Viewer.
- If 15 or more Tasks exist for a workflow step the Scroll Bar will no longer cover the bottom of the Task buttons.

- A user can no longer replace a page within the Document Viewer with a Multi-page .tiff image.
- Documents saved from within the Un-Indexed Queue are now properly routed within Workflow.
- Un-Indexed Queue will now display Divider names assigned from within Capture Lite or Importer.
- File Notes are no longer cut off during printing when the note expands 4 or more lines.
- Admin Console Plug-ins no longer display an error if the project is expanded.
- After running an E-form Process and then e-mailing, the E-forms will no longer attach the same E-form multiple times.
- Tool Tips can now be disabled preventing them from covering the associated button.
- Split Page Vertically option remembers the page size when selecting a new page.
- Saving a numeric field within the Document Viewer that uses the "\$" Mask no longer causes a VarChar error.
- User no longer receives an error when trying to save Document Notes.
- The first document in the file is no longer displayed when the "Show all Separators and Dividers" viewer option is enabled.
- All default Supported Document Types are entered within the Viewer Settings after a new installation of FileBound.
- PDF documents will now print to the selected printer.
- Multiple links are now included in e-mail messages when multiple pages from multiple files have been selected to be e-mailed from within the Document Viewer.
- Sort order from the Home page is now carried over into the Document Viewer.
- User's can now properly drag and drop an image, or object, into an empty file to add the content.
