

How Laserfiche® Works for IT

Cost-Effective Customization and Integration

- Design the ideal system to fit your IT environment with modular solutions.
- Integrate easily with other mission-critical applications.
- Enable your application to communicate with the Laserfiche Server using Laserfiche Server Objects, a powerful and flexible API.
- Integrate your Web-based applications with Laserfiche using the WebLink™ library of ASP.NET controls.
- Rely on packaged solutions to minimize expense and programming time.

Superior Security Features

- Guarantee future accessibility with non-proprietary TIFF and ASCII file formats.
- Eliminate the need for users to remember separate Laserfiche user names and passwords with Windows® Authentication.
- Use feature rights, access rights, scopes and tags to provide a user-friendly experience while still ensuring strict security.
- Choose from three levels of Audit Trail™ functionality to address your specific regulatory compliance and security needs.

Architecture Designed for Interoperability

- Leverage Windows tools with solutions that fit into your existing IT environment.
- Deploy enterprise solutions rapidly with a Web-based thin client.
- Enable remote offices to connect to the Laserfiche repository via VPN.
- Design a solution to fit your organization with support for both Microsoft® SQL Server™ and Oracle® database platforms.
- Store scanned documents as single-page TIFFs to make the smallest possible network footprint.
